PROJECTS

Multi-Branch Network w/ IP Telephony

Networking II Final Project

- Designed and configured a multi-branch enterprise VoIP network using Cisco IOS.
- Configured VLANs, inter-VLAN routing, OSPF/EIGRP, and DHCPv4/v6 for network connectivity.
- Implemented Layer 2 security, EtherChannel, and other enterprise network services.

Red & Blue Team Network Security Simulation

Network Security Final Project

- Used Kali-Linux to simulate network attacks using tools such as Nmap, Metasploit, and SQLmap
- Configured defensive measures including iptables, Snort IDS, OpenVAS, and Wireshark.
- Analyzed attack traffic across OSI layers to identify indicators of compromise and implement mitigation strategies

Encrypted Chat Messaging Site

Information Assurance & Security Final Project

- Engineered a multi-layer cipher pipeline (Vigenère, Vernam XOR, rail fence, RSA-2048) for end-to-end encrypted messaging.
- Built a Go REST API backend and React/Electron frontend for real-time encrypted chat.
- Implemented custom keystream generation and cipher logic from scratch in Go.

EDUCATION

Bachelor of Science in Information Technology

University of San Carlos | expected graduation Dec 2026
